**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. Claims 1-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, line 6, the term "the channel state estimation" lacks antecedent basis, as set forth in claim 14, lines 13-14; claim 26, line 7.

Regarding claim 8, line 2, the term "the transmission channel" lacks antecedent basis, as set forth in claim 21, line 2.

Claims 2-7, 9-13, 15-20, 22-25, 27-28 are rejected by virtue of their dependency.

***Allowable Subject Matter***

2. Claims 1, 14, 26 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

3. Claims 2-13, 15-25, 27-28 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of the record discloses or suggests that a method of decoding a turbo-code encoded signal in a receiver, the method comprising the steps of: receiving the signal from a transmission channel; digitally turbo-code decoding the signal; dynamically determining a quality information representative of conditions of the channel state estimation; and dynamically comparing the quality information with a

predetermined criteria for defining good or bad estimation conditions, wherein the step of digitally turbo-code decoding includes dynamically selecting a Maximum-A-Posteriori algorithm in the logarithmic domain for good estimation conditions, or an approximation of the Maximum-A-Posteriori algorithm in the logarithmic domain for bad estimation conditions as recited in claims 1, 14, 26.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wolf et al (US 2002/0010894 A1) disclose a turbo decoder stopping criterion improvement.

Worm et al (US 2003/0002603 A1) disclose a method and apparatus for decoding a bit sequence.

Gueguen et al (U.S. Pat. 7,127,443) disclose an adaptive turbo-coding and decoding.
